PROFESSIONAL SUMMARY

Data and automation engineer with 11 years of experience across software development, SQL/data systems, automation, BI, and technical leadership, with hands-on experience building data pipelines, data models, and decision-support reporting.

Built Python-based data pipelines, SQL data models, and Power BI reporting solutions supporting operational, financial, and delivery decisions. At Dexterous Group, built 50+ production automations at Dexterous Group delivering ~70 hours and ~AUD 2,800 in savings per month and built an automated Jira-to-Power BI pipeline that extracted and transformed operational data into a governed reporting dataset with scheduled refresh and automated weekly reporting.

Strong foundation in Python, SQL, ETL/data pipelines, data modeling, Power BI, DAX, Power Query, Automations, Git, and CI/CD, combined with experience supporting Australian stakeholders in distributed teams. Progressed from software development to RPA engineering and technical leadership while remaining hands-on with data and engineering solutions.

TECHNICAL SKILLS

Business Intelligence & Analytics — Power BI (Desktop, Service), Tableau, DAX, Power Query / M, data modelling, star schema, measures and calculated columns, date tables, row-level security, scheduled refresh, KPI reporting, data visualization, Microsoft Fabric, DataLake.

Data & Databases — SQL, T-SQL, stored procedures, views, user-defined functions, SQL Server, PostgreSQL, MySQL/MariaDB, SSMS, Databricks, Thoughtspot, ETL and data pipelines

Automation — UiPath, Power Automate, n8n, Zapier, VBA, Python, process automation, process optimization, production support

Software Development — C#, VB.NET, ASP.NET Core, Entity Framework Core, Python, REST APIs, Visual Studio, VS Code

Deployment & Version Control — Docker, GitHub Actions CI/CD, Render, DigitalOcean, Git, GitHub

Delivery & Business — Requirements analysis, Agile, Jira, sprint planning, QA/QC and test design, stakeholder management, team leadership, technical documentation

Microsoft & Collaboration — Microsoft 365, SharePoint, Excel (advanced)

KEY IMPACT HIGHLIGHTS

- Led and managed cross-functional automation teams (RPA developers, IT operations, product coordinators)
- Owned automation product strategy, roadmap, and delivery from discovery to production
- Delivered 50+ RPA and AI-driven automations improving operational efficiency and reducing manual workload using UIPath, Power Automate, Zapier, & n8n.
- Built automated Python/SQL data pipelines, Sales forecast, and Profitability reports connecting operational systems to Power BI reporting.
- Designed SQL data models and Power BI semantic/reporting layers supporting operational and management decisions.
- Delivered 50+ production automation solutions, saving approximately 70 hours and AUD 2,800 per month.
- Built approximately 10 Power BI reports covering operational performance, finance forecasting, workload, and delivery KPIs.
- Led distributed engineering teams supporting Australian stakeholders across requirements, development, QA, deployment, and production operations.

- Established engineering, QA/QC, documentation, and production-readiness standards across automation and IT operations.

EXPERIENCE

SENIOR AUTOMATION DEVELOPER / IT LEAD, 01/2026 - 04/2026 - Full time -Remote Based

Dexterous Group Pty Limited – New South Wales, Australia

- Led a 4-person automation and IT operations team, owning delivery of DexIQ, an internal automation and AI platform, from requirements through production release.
- Ran sprint planning, backlog prioritization, and delivery tracking in Jira. Established production-readiness standards covering testing, documentation, security, scalability, and reliability, reducing post-release defects.
- Served as escalation point for technical and delivery risk across engineering, operations, and business stakeholders.
- Defined and tracked delivery and operations KPIs used to direct team capacity and improvement priorities.

RPA DEVELOPMENT LEAD, 06/2025 - 01/2026 - Full time -Remote Based

Dexterous Group Pty Limited – New South Wales, Australia

- Built an automated Jira-to-Power BI data pipeline using Python, extracting operational data on a scheduled basis, transforming and structuring the data into a governed reporting dataset, and feeding an auto-refreshing Power BI reporting layer.
- Designed data models and reporting solutions supporting automation performance, finance forecasting, Jira team KPIs, workload distribution, and capacity planning.
- Developed approximately 10 Power BI reports used by leadership and clients to monitor operational performance, workload, profitability, sales forecasting and financial planning.
- Led a 3-person engineering team through requirements analysis, development, QA/QC, documentation, deployment, and production support.
- Introduced structured QA/QC and testing practices that improved release quality and automation reliability.
- Worked directly with Australian stakeholders in a distributed remote environment, translating business requirements into technical solutions and decision-support reporting.
- Mentored engineers through technical guidance, 1:1s, performance support, and delivery planning.

RPA DEVELOPER, 09/2022 - 05/2025 - Full time -Remote Based

Dexterous Group Pty Limited – New South Wales, Australia

- Designed, developed, tested, and maintained 50+ production RPA solutions in UiPath, delivering approximately 70 hours and AUD 2,800 in savings per month.
- Built reusable automation components, frameworks, and scripts that cut build time on subsequent automations and standardised error handling across the portfolio.
- Monitored production robots, schedules, and server utilisation, resolving failures to maintain continuous operation across business-critical finance processes.
- Developed supporting databases, internal applications, and APIs, including SQL data models feeding downstream reporting.
- Built Power BI reports for operational monitoring and performance analysis, translating process telemetry into metrics business owners could act on.

FULL STACK C# SOFTWARE DEVELOPER, 09/2017 - 08/2022 – Full time - Onsite

EHS Lens Philippines - **Tanauan City, Philippines**

- Developed and maintained enterprise applications using C#, VB.NET, VBA, SQL Server, and T-SQL supporting manufacturing operations for 500 users across 10 departments.
- Designed and optimized SQL Server databases, views, stored procedures, and user-defined functions, including query tuning against high-volume production tables.
- Built data models and database structures supporting operational applications and downstream reporting.
- Translated operational requirements into data-driven software solutions, owning delivery from requirements analysis through deployment and production support.
- Diagnosed production data and application issues, improving system reliability and resolving performance bottlenecks.
- Produced technical specifications, requirements documentation, and end-user training materials.

TECHNICAL SUPPORT ENGINEER, 07/2015 - 08/2017 - Full time - Onsite

EHS Lens Philippines - **Tanauan City, Philippines**

- Provided IT and network support for 400+ users across the organization
- Managed servers, workstations, and network infrastructure
- Handled troubleshooting, system maintenance, and technical support requests

SELECTED ANALYTICS PROJECTS

Jira-to-Power BI Reporting Pipeline — *Python · SQL · Power BI · Data Modeling · Automation*

Automated extraction and transformation of Jira operational data into a governed reporting dataset consumed through scheduled Power BI reporting. Designed to support sprint workload, team capacity, delivery KPIs, and management reporting.

Veydrin SaaS Data Platform — Databricks · PySpark · SQL · Delta Lake · PostgreSQL · ThoughtSpot

Built a Databricks lakehouse platform around a SaaS operations application, implementing watermark-based incremental ingestion, Bronze/Silver/Gold architecture, Unity Catalog, and curated Gold data models. Served the same governed analytical layer through Databricks AI/BI and ThoughtSpot for revenue, customer, and subscription analytics.

FlowOps Service Operations Analytics Platform — *Microsoft Fabric · Data Factory · Lakehouse · PySpark · SQL · Direct Lake · Power BI*

End-to-end analytical data platform built around FlowOps' operational PostgreSQL data. Implemented incremental ingestion, Bronze/Silver processing, automated data-quality validation, a curated Gold Warehouse, Direct Lake semantic modeling, and Power BI analytics for SLA performance, workload, resolution, and team operations.

FlowOps Operations & Delivery Management Platform — *C# · ASP.NET Core · EF Core · PostgreSQL · Docker · GitHub Actions*

Full-stack operational management platform demonstrating database design, application architecture, PostgreSQL, REST APIs, Docker, CI/CD, authentication, authorization, workflow, audit history, SLA logic, and analytics.

EDUCATION

Batangas State University, Batangas, 2015

Bachelor of Science: Computer Science

LANGUAGES

English: Proficient

Filipino: Native Language

CERTIFICATIONS

C# Programming using Microsoft .NET

Training conducted at Vidal Tan Hall, University of the Philippines Diliman, Quezon City

UP System Information Technology Foundation | Microsoft C# .NET Feb 2015

Google Data Analytics Professional Certificate

Coursera | Aug 2026

Microsoft Certified: Data Analyst Associate

Microsoft | July 2026

Career Service Professional Eligibility

Civil Service Commission | Oct 2015
